Follow Up Flag: Follow up
Flag Status: Flagged

JL,

I'd rather move to stainless steel. Typically we have to knockdown the strength of a part by 40% for welds. The weld in this case would be at the fitting portion of the part, so we would be taking a hit on the strength in a critical portion of the part.

Subject: FW: cck strut (647.4300)

Hi Pablo,

We are running into some cracking issues when fabricating these struts, there would be two possible solutions, the one below that David mentions or going to SS.

Let me know what you rather go for and I will issue an ECR if required.

Subject: cck strut (647.4300)

When punching the ends of the strut it cracks. Is it acceptable to weld and grind flush the cracks that are on the sides?

The material is 4130.

Date: Nov 7th 2014

Subject Drawing/Document: 647.4300's

Problem:

We are running into some cracking issues when fabricating these struts, Pablo recommendation was to go to SS material as discussed.
